Python version of unix tee

Rolf Sander

http://www.rolf-sander.net/software/pyteetime.html

Motivation

The unix command tee [1] splits the output of a program so that it can be both displayed and saved in a file. Unfortunately, Python does not provide something like this. The program pyteetime is based on the original code from Akkana Peck [2], with a few classmethods added.

Usage

Simply type "python tee-test.py" to see how it works.
